

DIRIS G

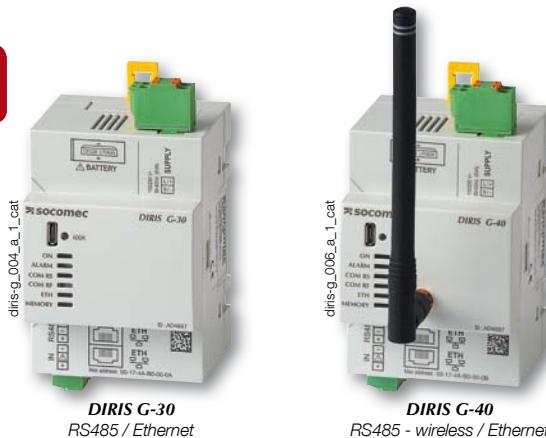

Wireless and cabled RS485 to Ethernet communication gateways

Communication gateways

new

Configuration with EasyConfig,
see page 142.

Function

With **DIRIS G** communication gateways, all information from metering and measurement devices communicating wirelessly or via the RS485 bus are centralised in a single device and then made available on the Ethernet network via Modbus TCP.

The gateway has an embedded WEBVIEW web server, allowing real time monitoring of electrical values and analysis of consumption data. The user can be alerted of any alarms via email.

Advantages

WEBVIEW embedded web server⁽¹⁾

DIRIS G gateways include an embedded web server. Two versions are available:

- Power Monitoring:
 - Real time measurements and alarms
- Power & Energy Monitoring:
 - Real time measurements and alarms,
 - Historical of measurements and analysis of consumptions.
- DIRIS D-90 touch-screen tablet can be fitted on the panel door to display WEBVIEW pages.

(1) See page 138.

Plug & Play

Connected metering and measurement devices are automatically addressed and detected by the DIRIS G gateway.

DIRIS G gateways provide:

- Automatic clock synchronisation (SNTP) with battery recording.
- Synchronisation of connected devices.
- Warning messages in case of alarms (e-mail SMTP).
- Automatic recording and storage of measurements and consumption data.
- Automatic display of tariff changes.

Scalable

Several optional modules are available:

- Digital inputs/outputs.
- Analogue inputs/outputs.
- Temperature inputs.

DIRIS O optional modules

Maximum 4 optional modules can be connected to a DIRIS G gateway to ensure control/command functions.

DIRIS O-iod	2 digital inputs / 2 digital outputs
DIRIS O-ia	2 analogue inputs / 2 analogue outputs
DIRIS O-it	3 temperature inputs
DIRIS O-m	Additional RS485 slave communication

For more information see DIRIS O optional modules see page 27.

Accessories

Remote radio antenna

- Allows the antenna to be mounted outside the enclosure to increase the transmission distance up to 300 m if there are no obstacles.

USB configuration cable

- Configuration of DIRIS G gateways can be achieved using the EASY CONFIG software via Ethernet or direct USB connection.

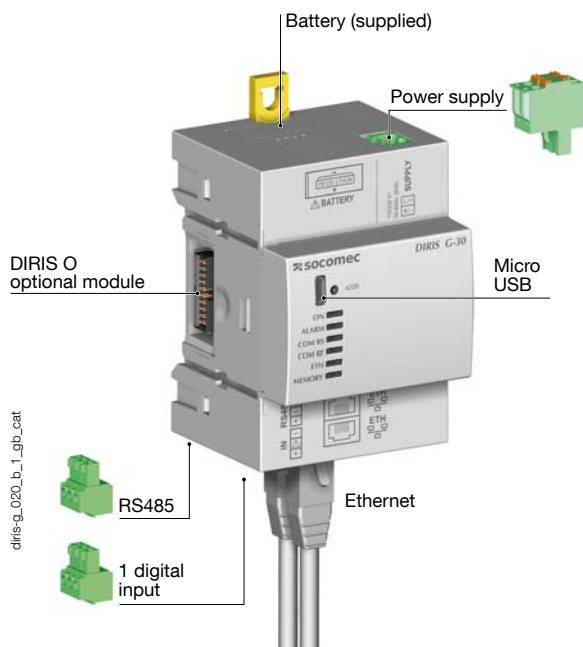

Wifi router

- The wifi router is connected to the gateway to allow wifi access to the WEBVIEW web server via the D-90 tablet.
